                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 5, Ag Sequence 10, Sequence 11, Ag Sequence 1, Ag Sequence 18, Sequence 23, Sequence 23, Sequence 1, Ag Sequence 1, Ag Sequence 1, Ag Sequence 1, Ag Sequence 15, Sequence 35, Sequence 35, Sequence 35, Sequence 36, Sequence 36, Sequence 26, Seq

Sequence 10, Application US/08470953A

Patent No. 6346407

GENERAL INFORMATION:
APPLICANT: ANDREE LAHAYE
APPLICANT: PIERRE LEDOUX
APPLICANT: PIERRE LEDOUX
TITLE OF INVENTION: Xylanaee, microorganisms produce
TITLE OF INVENTION: DNA molecule, processes for pref
TITLE OF INVENTION: and uses thereof
NUMBER OF SEQUENCES: 29

Bacillus derived xylanase active over wide pH range - used in treatment of paper pulp, animal feeds and in bakery goods. WPI; 1996-117341/13. P-PSDB; AAR92053.

Claim 30; Page 50-51; 94pp; English.

A DNA sequence (AAT16101) coding for a thermostable mature xylanase (AAR92053) was isolated from a gene library of Bacillus sp. 720/1 (LMG P-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
14798). Sequences were also obtd. (see AAT16102 and AAT16103) for the xylanase precursor and for the complete gene including 5' and 3' untranslated sequences. DNA coding for the mature enzyme may be incorporated into a vector and expressed from either its own promoter or from the Bacillus pumilus PLB 12 promoter (AAQ73996), and used for prodn. of recombinant xylanase in transformed hosts, pref. Bacillus licheniformis or B. pumilus. The enzyme is useful in the paper-pulp, animal feed and baking industries. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420

180 A DNA sequence (AAT16102) coding for a xylanase precursor (AAR92054) was isolated from a gene library of Bacillus sp. 720/1 (LMG P-14798). The sequence (AAT16103) for the complete gene including 5' and 3' untranslated sequences was also obtd. The gene may be incorporated into a vector and expressed from either its own promoter or from the Bacillus pumilus PRL B12 promoter (see AAQ73956), and used for proof. of recombinant thermostable xylanase in transformed hosts, pref. Bacillus licheniformis or B. pumilus. The enzyme is useful in the paper-pulp, and mal feed and baking industries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a polypeptide with xylanase activity used in an example of the present invention. The present invention describes a novel method for providing a novel DNA sequence encoding a polypeptide from a microorganism with an activity of interest. The method comprises:

(i) PCR amplification of the DNA with PCR primers with homology to (a) known gene(s) encoding a polypeptide with an activity of interest; (ii) linking the obtained PCR product of a 5' structural gene sequence and a 3' structural gene sequence and a sequence; (iiv) screening for hybrid DNA sequences encoding a polypeptide with the activity of interest or a related activity; and (v) isolating the hybrid DNA sequence identified in step (iv). This method provides for identification and isolation of sequences from microorganisms without having to cultivate and isolate the microorganism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                             The present sequence encodes a xylanolytic enzyme of Bacillus agaradherens NCIMB 40482. Xylanolytic enzymes are used for enzymatic breakdown of agricultural wastes for production of alcohol fuels, enzymatic treatment of animal feeds to release free pentose sugars, manufacturing of dissolving pulps yielding cellulose and bio-bleaching of wood pulp. They are also used for treatment of lignocellulostic material e0.3 peor and pulp, or as an animal feed additive. (Updaced on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-AUG-2003 to correct OS field.) (Updated on 17-OCT-2003 to standardise OS field)

The sequence encodes an alkaline endo-1,4-beta-D-xylanase (G-type) from Bacillus sp. 1-43-3. Fragments of the sequence (e.g. the internal fragments given in AAQ22876 and AAQ92877) may be amplified by polymerase chain reaction, e.g. using primers with sequences AAQ92866, AAQ92869. The DNA may be cloned in Escherichia coli using a plasmid vector for recombinant xylanase production. The xylanase may be used in the paper and pulp industries, where it produces an increase in treated pulp in an BCF pulp bleaching process, at pH 9.0 and 65 deg C. The enzyme may be used in production of paper, board and fluff pulp, and has low cellulase activity. The increased brightness produced using the xylanase allows reduction in the amount of bleaching chemicals used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prodn

                                   The present sequence represents a positive clone for xylanase activity from an example of the present invention. The present invention describes a novel method for providing a novel DNA sequence encoding a polypeptide from a microorganism with an activity of interest. The method comprises: (1) PCR amplification of the DNA with PCR primers with homology to (a) known gene(s) encoding a polypeptide with an activity of interest; (ii) linking the obtained PCR product of a 5' structural gene sequence along a polypeptide with a sequence senceding a polypeptide with the activity of interest or a related activity; and (v) isolating the hybrid DNA sequence and (v) isolating the hybrid DNA sequence identified in step (iv). This method provides for identification and isolation of sequences from microorganisms without having to cultivate and isolate the microorganism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (SI), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning; beverage production; as a nutritional supplement in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  255
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning, beverage production, as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cagacgarcaccaactarcercegracecardacecrrardacrardaracresaag 138

 animal feed, reducing lignin in a wood or a wood product; and for calminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplification of a template nucleic acid with a primer pair capable of amplification of a template nucleic acid with a primer pair capable of preventing (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental
                                                                                                                                                                                                                                                                                                      9

The present sequence is a DNA encoding xylanase A (XynA) from Clostridium stercorarium. XynA contains family VI cellulose binding domain (CED) which is homologous to the CBD of xylanase Z (XynZ) of Clostridium thermocellum. XynZ is an enzymatic component of C. thermocellum cellulosome and has a multi-domain structure which includes a dockerin domain, a catalytic xylanase domain, a family VI cellulose binding domain and a domain of unknown function. The unknown domain in the N-terminal region of XynZ has been found to contain feruloy! (phenolic acid) esterase which is involved in the degradation of plant cell wall material. The novel feruloyl esterase is thermostable, easy to purify, has high temperature optima and stable over a wide pH range. The enzyme is used for producing ferulic acid from wheat bran or agricultural byproducts, treating grasses or other plant materials used in the pulp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   829

                          recombinant plasmids carrying the xylanase gane. A chromosomal fragment obtained from isolate pBPX1 was subcloned and expressed in Escherichia coli JM109. The sequence of the xylanase gene (as a 1022 bp Sau3A1 fragment) carried by a selected transformant is given in AAQ80923
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AACATGTCCATAAACTACGGAGCCAACTTCCAACCAAATGGTAATGCGTATTTATGCGTC

The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for: dough conditioning, beverage production, as a nutritional supplement in animal feed, reducing lignin in a wood or a wood product, and for eliminating and protecting animals from a microorganism comprising xylan. The polymucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     270

The present sequence represents a RT46B.1 xynB gene and encodes a xylanse enzyme. The present sequence is derived from a gene contained within Dictyoglounus thermophilum strain Rt46B.1 The xylanase is contained within the family of enzymes known as G-Xylanases, and has beta -1,4-xylanase activity. The enzyme has high activity and high thermal stability with optimum activity at 85 degrees Celcius and pH 6.5. The xylanase enzyme is used for the biological bleaching of cellulose products, especially paper pulp. Use of the enzyme ensures that waste streams from the biological bleaching will include less toxic material
